PROFESSIONAL SUMMARY

MS in Business Analytics candidate at UC Davis with **2+ years of experience** in **data analytics and marketing analytics**, with a strong foundation in **statistical modeling, data pipelines, and predictive analytics**. Having hands-on experience building production **AI systems and spatial forecasting models**. Skilled in translating **analytical outputs** into **business decisions**, from deploying a **RAG-based AI agent** and **forecasting** data-center siting probabilities to driving **customer and revenue growth** at a consumer food **startup**. Passionate about using data and AI to solve complex, real-world problems.

Core Competencies: Data Analysis, Statistical Modeling, Forecasting, A/B Testing, Machine Learning, RAG Systems, LLM **Technologies:** Python (pandas, NumPy, statsmodels, scikit-learn), SQL, R Programming, Power BI, Advanced Excel

EDUCATION

University of California, Davis Master of Science, Business Analytics (GPA 3.94/4.0) <i>Coursework:</i> Data Management, Advanced Statistics, Big Data, Machine Learning, Data Visualization	San Francisco, CA Expected Jun. 2026
Ghulam Ishaq Khan Institute Bachelor of Science, Mechanical Engineering	Topi, PAK Aug. 2021 - Jun. 2025

PROFESSIONAL EXPERIENCE

Amplytico Data Analyst, Practicum Project <i>Collaborating with senior leadership as part of the UC Davis MSBA practicum to deliver forecasting models for U.S. data-center expansion and a production RAG-based AI agent for construction safety compliance.</i> - Automated Python ETL pipeline for 5+ spatial predictors using large data sets of 5K+ candidate sites via APIs and web scraping, creating database to correlate predictors with data center siting probabilities. - Conducted hypothesis testing (Welch's t, Mann-Whitney U) for features' statistical significance, controlling spatial noise and optimizing feature selection to get 5+ predictors for model inclusion. - Built a regularized logistic regression model with cross-validation to forecast site suitability with more than 85% balanced accuracy, narrowing and recommending candidate locations for data centers in southern California. - Built a production RAG-based AI agent (ChromaDB + Claude) on regulatory PDFs, delivering cited, document-grounded answers with 84% coverage across a 75-question evaluation set. - Engineered an evaluation-first tuning loop with an LLM-as-judge scoring pipeline, recalibrating the judge prompt to reduce measured hallucination to 0.0% while preserving answer quality and logging refusals into a gap repository.	San Francisco, CA Sept. 2025 - Jun. 2026
Fermento Co-Founder & Marketing Analytics Lead <i>Co-led a cross-functional team at a consumer food startup, managing digital-marketing strategy, analytics, and team operations to scale customer acquisition and revenue growth.</i> - Directed digital marketing campaigns across Meta Ads platforms by analyzing performance metrics including CPC, CTR, and ROAS, resulted in a 25% increase in total revenue. - Optimized marketing spends via A/B testing and audience segmentation, identifying high-ROAS demographics and ad campaigns to optimize spend by 30% and financial performance while increasing overall conversion rates. - Scaled customer base by 40% by deploying segmented promotional offers; analyzed response data to identify high-impact incentives and optimize conversion across the acquisition funnel. - Fostered a collaborative, data-driven team culture by leading a 5-member team on KPI tracking and reporting; streamlined workflows to improve efficiency and align execution with business goals.	Karachi, PAK Feb. 2022 - May. 2024

PROJECTS

Digital Advertising Experiment Analysis (View Project) (R A/B Testing Hypothesis Testing ROI Analysis) Randomized digital advertising experiment to evaluate ad creative performance and inform budget allocation decisions.
Mall Customer Segmentation (View Project) (Python PCA K-Means Customer Analytics) PCA and KMeans clustering to segment customers by age, income, and spending behavior for targeted marketing insights.
BiteWise (View Project) (Python Flask SQLite Chrome Extension) An end-to-end food recall detection tool to surface real-time alerts on Instacart pages ensuring safe purchasing.
